### **DETAILED ACTION**

1. This office action is responsive to the papers filed 12/15/06. The amendment to the specification has been entered. Claims 1-41 are pending with claims 10-29, 31-41 being withdrawn from further consideration and claims 1-9, 30 being examined.

#### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 30 are rejected under 35 U.S.C. 102(b) as being anticipated by Isomura (U.S. Patent 6,374,310).

Isomura teaches a dynamic random access memory (DRAM) device (memory board 20 in figures 14 and 15) comprising: a DRAM core (58) having memory cells for storing data; and a read protection unit (50) for preventing the data stored in the memory cells before power is removed, from being read out when power is supplied. (See column 10, line 50 through column 11, line 13.)

#### ***Allowable Subject Matter***

4. Claims 2-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record fails to teach the further limitations of the DRAM core in

which a well region within which the memory cells are formed; and a back-bias voltage generator circuit for generating a back-bias voltage and for supplying the voltage to the well region.

### ***Response to Arguments***

6. Applicant's arguments filed 12/15/06 have been fully considered but they are not persuasive. On the second and third pages of the Remarks, Applicants contend that the Isomura patent discloses a ***system level*** apparatus, not a ***semiconductor*** memory device as cited in claims 1 and 30. Now let analyze the rejected claim 1 or 30. Neither claim recites a semiconductor memory device as argued, but a dynamic random access (DRAM) device. In figure 14 of Isomura, the DRAM is labeled as storage unit 58. Thus, Isomura clearly teaches the limitation of DRAM as claimed in claims 1-9 and 30.

### ***Conclusion***

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
